Portland's MAX trains sometimes run slower in hot weather. Seattle's trains don't share this problem. According to Bruce Gray of SoundTransit the reasons that Seattle's trains aren't impacted by high temperatures are:

Choose 2 correct answers

- A. SoundTransit uses all concrete rail ties, which don't react to heat in the same way the MAX's wood ties do.
- B. The MAX system experiences expansion and drooping of copper overhead wires.
- C. Different average speeds on the two systems means that speed reductions on the MAX are greater and more noticeable for commuters.
- D. Modified wheel design on the SoundTransit cars allows for operation at speed across a greater range of temperatures.

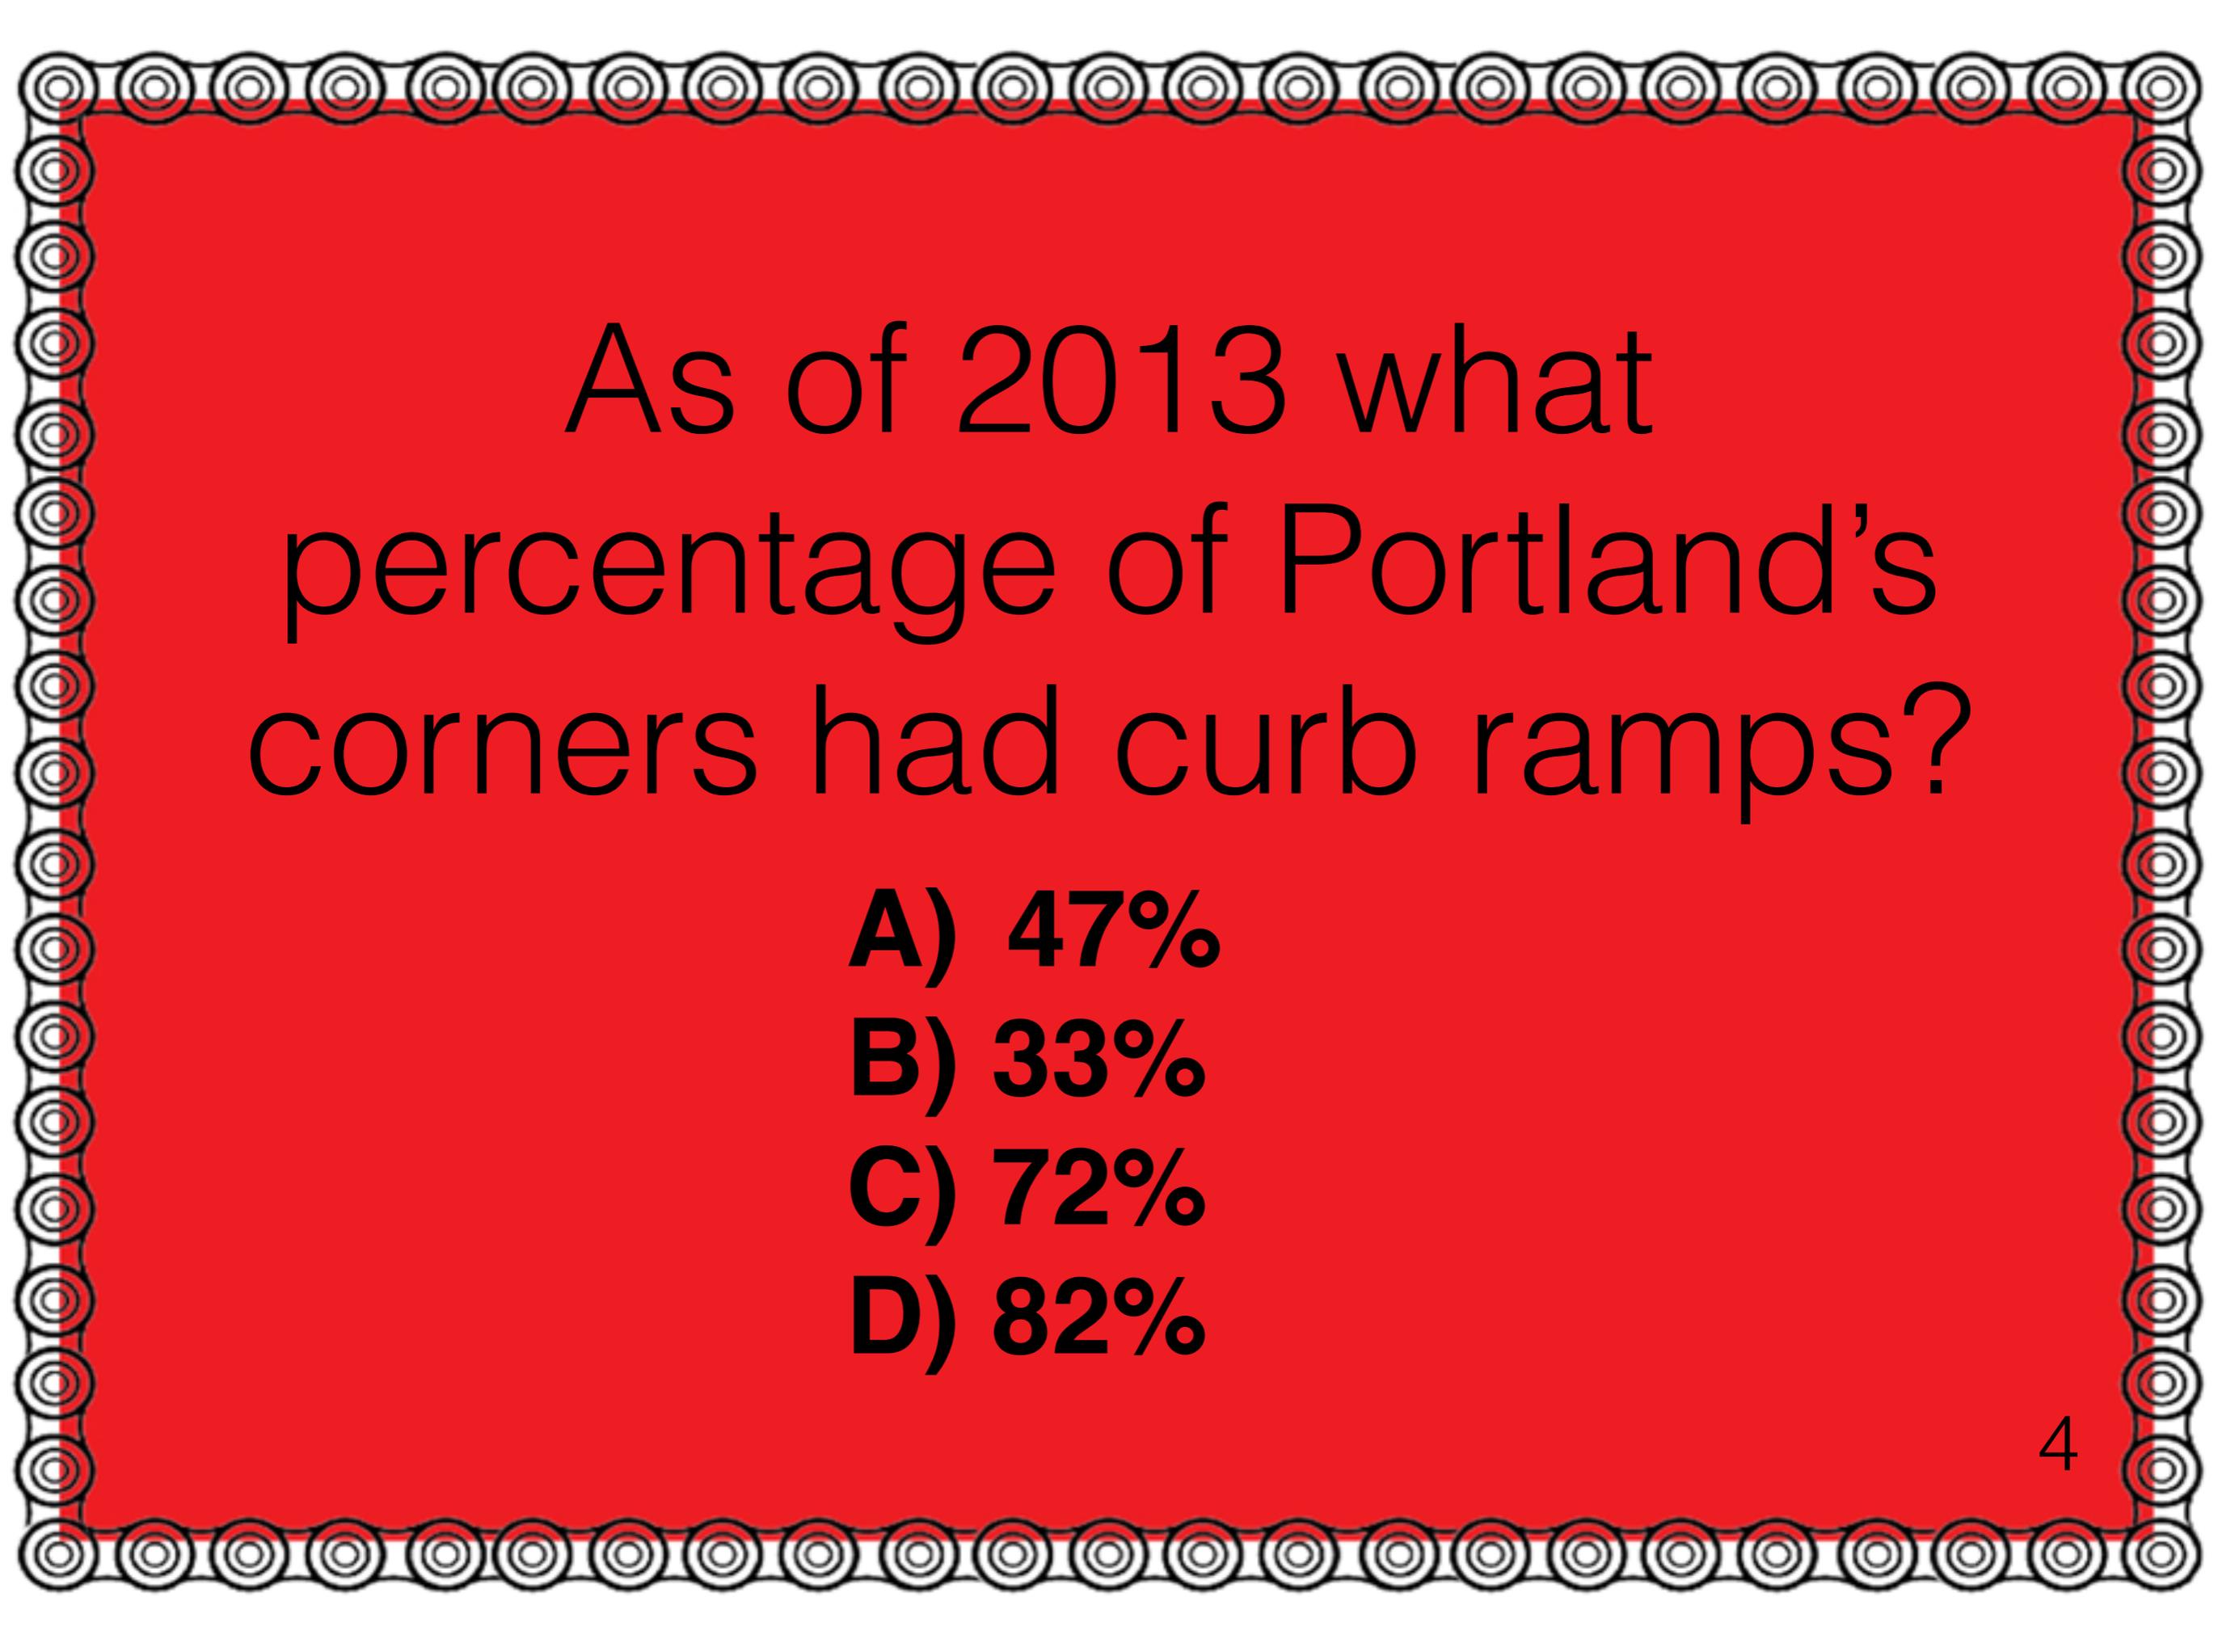

The family biking skills event “Fiets of Parenthood” has been running for how many years?
